# This Module

Adding Routing to the Project
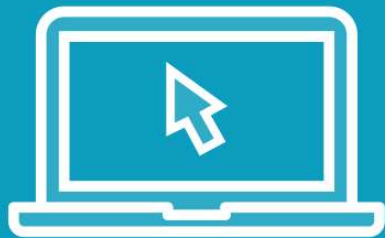

Create Routes

Using Tokens in Angular

Use Form Binding
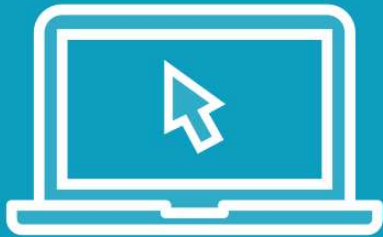

Use Validation

Implement the Server-Side Code

Demo

Add Routing to the Project
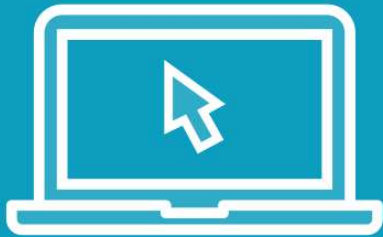

# Demo

## Support Login

# Demo

**Use Form Binding**
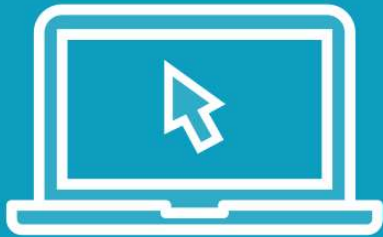

# Demo

**Add Validation**

# Demo

Use Token Authentication

# Demo

**Implement Checkout**

# What We've Learned

Routing is a separate module

Creating the routes is pattern based

Route/Views are similar to server-side MVC

The views keep state when switching views
